

❑ SECTION 1: Self-Introduction & Role Clarity

1. Can you briefly introduce yourself and your DevOps experience?
 2. What kind of DevOps engineer are you — more infrastructure or more CI/CD focused?
 3. What were your responsibilities as a Graduate Engineer Trainee?
 4. Which tools do you use daily in your role?
 5. How do you prioritize tasks when multiple issues come at the same time?
 6. Did you work independently or under senior guidance?
 7. How do you communicate progress or issues within your team?
 8. What was your involvement level with client projects?
 9. How do you ensure your work does not impact production?
 10. What kind of tasks were you confident handling on your own?
-

❑ SECTION 2: Project-1 (AWS Infrastructure & CI/CD with Terraform & Jenkins)

11. Can you explain the AWS infrastructure you provisioned using Terraform?
 12. How did you structure Terraform modules for multiple environments?
 13. Why did you choose a remote backend for Terraform state?
 14. How does DynamoDB help in Terraform state management?
 15. What kind of IAM permissions were required for Jenkins to run Terraform?
 16. How did you integrate Terraform into Jenkins pipelines?
 17. What happens if Terraform apply fails in the middle?
 18. How did you handle environment-specific variables in Terraform?
 19. What is Terraform drift and how did you detect it?
 20. How did you ensure infrastructure consistency across environments?
-

❑ SECTION 3: Jenkins CI/CD Pipeline (Java Application)

21. Can you explain your Jenkins pipeline end-to-end?
22. How did you manage artifact versioning using Jenkins build numbers?
23. What role does Maven play in your pipeline?
24. How did you upload artifacts to Nexus?
25. How did you ensure the correct artifact version was deployed?
26. What kind of failures did you face in Jenkins pipelines?

- 27. How did you troubleshoot a failed Jenkins build?
 - 28. How did you secure credentials in Jenkins?
 - 29. Why did you use Docker-based Jenkins agents?
 - 30. What are the advantages of ephemeral Docker agents over static agents?
-

□ **SECTION 4: Ansible & Configuration Management**

- 31. What kind of tasks did you automate using Ansible?
 - 32. Why did you use Ansible after Terraform?
 - 33. How did Ansible dynamic inventory work in your setup?
 - 34. What is idempotency in Ansible?
 - 35. What issues did you face while running Ansible playbooks?
 - 36. How did you rerun only the Ansible stage without re-running Terraform?
 - 37. What is the difference between Ansible roles and playbooks?
 - 38. How did you manage environment-specific configurations in Ansible?
 - 39. How did you handle passwordless authentication?
 - 40. How did you validate that configuration was successful?
-

□ **SECTION 5: Project-2 (AWS EKS – Support & Validation Role)**

- 41. What do you mean by “supported and validated” an EKS environment?
 - 42. What EKS components were already set up, and what did you work on?
 - 43. How does EKS differ from self-managed Kubernetes?
 - 44. What was your role in Ingress and LoadBalancer configuration?
 - 45. How did cert-manager work in your cluster?
 - 46. What kind of TLS issues did you observe or validate?
 - 47. How did Prometheus collect metrics in your cluster?
 - 48. What role does Grafana play?
 - 49. How does Loki differ from Prometheus?
 - 50. How did centralized logging help in troubleshooting?
-

□ **SECTION 6: EKS Storage, Security & Policies**

- 51. What is IRSA and why is it important?
- 52. Why did you use the AWS EBS CSI Driver?

53. What is a StorageClass and how is it used?
 54. What happens if a PVC stays in Pending state?
 55. How do you restrict access across namespaces?
 56. What is the role of RBAC in EKS?
 57. Why are NetworkPolicies needed?
 58. What is Kyverno and why was it used?
 59. How did policies help maintain consistency?
 60. How do you ensure least-privilege access in EKS?
-

□ **SECTION 7: Issues Faced & Troubleshooting (VERY IMPORTANT)**

61. What was the most common Terraform issue you faced?
 62. How did you troubleshoot IAM permission errors?
 63. What Jenkins issue took the longest to fix?
 64. Have you faced deployment failures? How did you resolve them?
 65. What would you do if a pod goes into CrashLoopBackOff?
 66. How would you troubleshoot an ImagePullBackOff error?
 67. What steps would you take if Ingress URL is not working?
 68. How did monitoring help reduce debugging time?
 69. What would you do if Prometheus stopped scraping metrics?
 70. How do you safely rollback a failed deployment?
-

□ **SECTION 8: Behavioral & Growth Questions**

71. What was the biggest challenge you faced in these projects?
72. What did you learn from working with senior DevOps engineers?
73. How do you handle a situation where you don't know the solution?
74. How do you ensure reliability in automation?
75. What improvements did you bring to the team?
76. How do you handle pressure during production issues?
77. What would you do differently if given the same project again?
78. How do you keep yourself updated with DevOps tools?
79. Why are you looking for a new opportunity?
80. What kind of DevOps role are you looking for next?
